Dear Dr. Henney:

I am writing this letter in regard to my concern of GMOs in our foods. I am totally against this process. Science is tampering with what God has made. This is wrong and will cause harm to humans, animals and forever change nature. If Europe and Canada are banning this process why in the world is the United States allowing this to happen.

What is happening in our country is Man is trying to take over what God has done perfectly. God never had a plan B. The people of this country need to open their eyes, ears and mouths and start objecting to what these so called scientists are trying to do. Europeans and Canadians are not as sickly a group of people as the people of our country. We have more illnesses (ie heart attacks and cancer, etc.) then they have in European countries and Canada. I have no objection to moving forward, but Man must stop messing around with what God has made.

Whatever needs to be done to either stop this GMO process or to at least give us the ability to not purchase products with this injected, by demanding the FDA label these products accordingly. AT LEAST GIVE US A CHOICE.

Sincerely yours,

Sharon M. Schott
